

ADITYA

Game Designer · Gameplay Designer · Unity Developer
+91 89501 93775 | sadiyasharma989@gmail.com | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Game Design student specializing in gameplay mechanics, level design, and interactive systems. Experienced in Unity (C#) for 2D/3D games, horror mechanics, enemy AI behavior, wave-based encounters, and engaging game loops. Skilled in player controllers, hazard logic, win/lose conditions, and UI/UX design. Academic excellence: 9.05 CGPA. NCC Certified. Passionate about fun, balanced, immersive player experiences through structured iteration and play testing.

TECHNICAL SKILLS

Game Design: Gameplay Mechanics, Level Design, Horror Systems, Enemy AI, Wave Design, Balancing, Prototyping
Development: Unity (C#), 2D & 3D Game Dev, Player Controllers, Hazard Systems, NPC Behaviour
Programming: C, C++, C#, HTML, CSS, JavaScript
Tools: Blender, Adobe Photoshop, Unity Engine

SOFT SKILLS

- ◆ Leadership (NCC Certified)
- ◆ Team Collaboration
- ◆ Systems Thinking
- ◆ Analytical Problem Solving
- ◆ Iterative Design

EDUCATION

B.Tech — CSE
Chitkara University, Punjab
CGPA: 9.05 | 2023 – Present
Class 12 — HP Board · 87%
Class 10 — HP Board · 84%

PROJECTS & EXPERIENCE — GAME DESIGNER & DEVELOPER | ACADEMIC & PERSONAL | 2023 – PRESENT

Shadow Walker — 2D Horror Maze Escape Game *Unity · C# · 2D Maze System · NPC Enemy AI · Dynamic Lighting*

- ▶ Horror escape game: child protagonist navigates procedural dark mazes, collecting keys to reach exits — inspired by the atmospheric tension of Takeshi Castle.
- ▶ Inverse health mechanic: player heals in darkness, takes damage in light — a risk-reward dynamic that flips conventional gameplay expectations.
- ▶ Roaming patrol light system sweeps the maze, forcing players to anticipate light movement and plan safe routes through shadow corridors.
- ▶ NPC enemy pursues the player on detection, adding stealth pressure alongside environmental light hazards for layered difficulty.
- ▶ Multi-level progression with key-based locked doors — rewards exploration and route-planning at every stage.

Zombie Shooter — Wave-Based Survival Shooter *Unity · C# · Wave Spawning · Enemy AI · Hazard & Damage Logic*

- ▶ Wave-based zombie survival shooter: eliminate all enemies per round to unlock the key and advance to the next level.
- ▶ Dual-damage system: zombies deal contact damage AND launch poison bombs creating lingering AoE hazard zones on impact.
- ▶ Balanced wave scaling across levels — gradually increasing zombie count and aggression without breaking player agency.
- ▶ Core loop built around resource management and spatial awareness: shoot → survive → clear wave → collect key → advance.

VALKERYA — 3D Fantasy Action-Adventure Game (Group Project) *Unity · Game Design · UI/UX · 2D Art · Cutscene Design*

- ▶ Served as the **Game Designer**, contributing to gameplay mechanics, level progression, player experience, and the Game Design Document (GDD).
- ▶ Designed the game's **UI/UX**, including menus, HUD elements, icons, and interaction prompts to create an intuitive player interface.
- ▶ Created **in-game cut-scenes** by planning camera sequences, transitions, and visual storytelling to enhance the game's narrative and immersion.
- ▶ Produced supporting **2D art assets** such as UI graphics, icons, and visual elements, collaborating with the team to maintain a consistent fantasy art style throughout the game.
- ▶ Worked closely with programmers and artists to integrate design assets, iterate on gameplay based on playtesting feedback, and improve the overall player experience.

ACHIEVEMENTS

★ **NCC Certified** — Leadership, discipline, and teamwork through structured military training. ★ **8.9 CGPA** — Consistent academic excellence at Chitkara University. ★ **Original Game Concepts** — Designed & prototyped Shadow Walker and Zombie Shooter with custom AI, Valkerya 3D Action game. ★ **Multidisciplinary Projects** — Hands-on work spanning game design, IoT, and machine learning.
